Trinium Releases Version 5.0 Of It's Enterprise Trucking Application

PALOS VERDES, California – April 15, 2008 - Trinium Technologies, a leading provider of enterprise transportation software for the trucking industry, has released version 5 of its product suite.

Trinium develops software applications that drive financial improvement for trucking companies of all sizes. The company continues it's commitment to consistent improvement of it's applications to meet the growing needs of its customer base.

The company provides an annual release of its product suite. The positive results from the v5.0 release are a direct result of the company's policy of working with its customers during the product development process. "Engaging with our customers on product development is a company policy at Trinium. Listening to our customers, as the true experts in running trucking operations, is what has enabled us to gain a leadership position in the market in a relatively short period of time," said Dennis Lane, vice president of sales and marketing at Trinium Technologies.

The version 5.0 release includes over 100 functional enhancements to the system including upgrades to the graphical user interface, single screen order entry, improved sorting and filtering capability, more flexible rating, improvements to the document imaging module, enhancements to the web tracking module, among others.

About Trinium Technologies - Trinium Technologies is a leading provider of enterprise systems for intermodal trucking companies. www.triniumtech.com.
