GSC Logistics Implements Trinium-TMS to Automate Its Growing Intermodal Trucking Division

GSC Logistics, a growing intermodal trucking company and third party logistics provider based in Oakland, California, has implemented Trinium-TMS to manage its intermodal trucking operations. **Trinium Technologies** is a software company that specializes in driving financial improvements for intermodal trucking companies.

GSC had out grown its internally developed legacy system that managed the company's intermodal and truckload operations. In order to more efficiently manage a larger operation, the company decided to pursue a system upgrade.

"Intermodal trucking is a major growth area for our company. We strategically selected Trinium to assist us in managing this growth. We now have a leading TMS that will enable our company to gain a competitive advantage in the market" said Scott Taylor, president, GSC Logistics.

GSC has moved to a real-time dispatch environment with Trinium-TMS. By processing dispatches of loads and empties in real-time, the company has automated all back office work processes such as document management, billing, and driver settlements. GSC also purchased the Trinium Document Imaging Module and Trinium EDI Module. The company is committed to automating its communication with customers through EDI processing. The company also plans to implement Trinium's web tracking module (Trinium Weblink) and mobile communications module (Trinium MobileComm Module) for dispatcher-to-driver communications.

"GSC is an excellent example of a company that adopts technology not only to improve internal efficiencies but to gain a competitive advantage in the market. Their aggressive approach in processing transactions with their customers via EDI is an example of this commitment to automate their business." said Michael Thomas, CEO, Trinium Technologies.
