

## PRESS RELEASE

### Trinium Releases v7 of its Transportation Management System

---

PALOS VERDES, California – May 24, 2011 - Trinium Technologies, a leading provider of enterprise systems for the trucking industry, has released version 7 of its transportation management system. Since 2000, Trinium has developed systems for intermodal and multi-modal trucking companies to assist them in streamlining operations, improving productivity and cash flow, and enabling improved visibility for their customers.

Trinium introduced the new version at the company's user conference in Long Beach, California, May 10-11. The conference was well attended with half the company's trucking customers represented. The upgrade contains over 150 functional enhancements to the system, with dozens of customers in the process of deploying the upgrade to take advantage of the new functionality. "Our goal is to consistently deploy practical functionality for our customers' end users and managers, the people that use the system every day to run their business. These are the people that drive our product development strategy," said Michael Thomas, CEO of Trinium Technologies.

The version 7 release includes enhancements to intermodal equipment matching capabilities, enhanced chassis monitoring functions, management and end user dashboards, additional onboard computer interfaces, new end user tips throughout the system, and dozens of other enhancements, largely derived from customer feedback.

About Trinium Technologies - Trinium Technologies is a leading provider of enterprise systems for intermodal and multi-modal trucking companies. The company assists trucking companies to reduce costs, grow revenue, and improve customer service. The company has customer installations of all sizes throughout the U.S. and Canada.
