Trinium Technologies Releases Version 4.0 of Its Transportation and Logistics Software Applications Suite

Trinium Technologies, a leading provider of intermodal transportation and logistics software for the trucking and third party warehousing industries, has released version 4 of its integrated product suite.

Trinium is focused on driving financial improvements for trucking and logistics companies of all sizes. The release of Trinium 4.0 is a result of the company's long standing partnerships with quality operators. The company is committed to the continued development of its application suite and to deploying practical enterprise solutions that drive business value.

"Our customers are looking for software applications that give them a competitive advantage in the market. Our applications are designed to assist companies grow revenues, reduce costs, and improve customer satisfaction" said Michael Thomas, CEO of Trinium Technologies.

Trinium 4.0 includes dozens of enhancements to the core Trinium-TMS application, which is an enterprise system for intermodal trucking companies. The enhancements include several improvements to the dispatch module, document imaging module, event management module, web tracking module and the company's latest release the Trinium MobileComm Module. MobileComm is a mobile application that is easily downloaded to a driver's Java-enabled cell phone providing real-time connectivity between the driver and the dispatch module.

Trinium has signed a record number of customers in 2005, with similar growth expected in 2006. The company has also grown its support and technical staff to meet the growing demand for its products.
