Progressive Transportation Services (PTS) extends investment in Trinium Technologies by purchasing Trinium's Document Imaging Module

Progressive Transportation Services, an intermodal trucking company, purchased Trinium's Document Imaging Module to further streamline backend business processes and improve efficiencies throughout the company.

PTS implemented **Trinium-TMS** in 2001 when the company had 5 employees and 30 drivers. Since then PTS has grown to 3 sites in Southern and Northern California with 150 drivers. As they continue to grow their business, PTS management is constantly looking at ways to gain internal efficiencies that enable them to manage more business at a lower cost.

The Trinium Document Imaging Module is tightly integrated with **Trinium-TMS** providing a seamless interface with customer service, operations, and accounting. Documents are scanned and auto-indexed to the proper order within Trinium. Document retrieval is performed electronically from the user's desktop. Scanned images provide the user with the flexibility to perform email invoicing. Customers will also be able to retrieve documents from the PTS web site via secure sign-on.

"Trinium continues to release functionality that provides practical business solutions for company's like ours. Their document-imaging module will enable us to reduce administrative costs and centralize billing." Said Mike Stanley, president of PTS.
